MATHEMATICS FINAL EXAM – KEY 14 August 2013

QUESTION 1 The blanks below will be filled by students. (Except the score)

Surname:	Name:	Group Number:	List Number:	**Score**
Signature:	Electronic Post(e-mail) address:	Student Number:		

For the solution of this question please use only the front face and if necessary the back face of this page.

Evaluate the following integrals

[12 pt] a)

$$\int \sqrt{1+e^x}\,dx$$

[13 pt] b)

$$\int \frac{\sin x+\cos x}{\tan x+\cot x}\,dx$$

a) $\int \sqrt{1+e^x}\,dx = \left\{ \begin{array}{l} 1+e^x = u^2 \\ e^x dx = 2u\,du \end{array} \right\} = \int \sqrt{u^2}\cdot \frac{2u\,du}{u^2-1}$

$= 2\int \frac{u^2\,du}{u^2-1} = 2\int \frac{u^2-1+1}{u^2-1}\,du = 2\left\{ \int \left(1+\frac{1}{u^2-1}\right) du \right\}$

$\frac{1}{(u+1)(u-1)} = \frac{A}{u-1} + \frac{B}{u+1}$ $\nearrow A = \frac{1}{2}$ $\searrow B = -\frac{1}{2}$

$= 2\left\{ \int \left(1 + \frac{1/2}{u-1} - \frac{1/2}{u+1}\right) du \right.$

$= 2\left\{ u + \frac{1}{2}\ln|u-1| - \frac{1}{2}\ln|u+1| \right\} + C$

$= 2u + \ln\left|\frac{u-1}{u+1}\right| + C = 2\sqrt{1+e^x} + \ln\left|\frac{\sqrt{1+e^x}-1}{\sqrt{1+e^x}+1}\right| + C$

b) $\int \frac{\sin x+\cos x}{\frac{\sin x}{\cos x}+\frac{\cos x}{\sin x}}\,dx = \int \frac{\sin x+\cos x}{\frac{1}{\cos x \sin x}}\,dx$

$= \int (\sin^2 x\cos x + \cos^2 x \sin x)\,dx = \int \underbrace{(\sin x)^2}_{u}\underbrace{\cos x\,dx}_{du} + \int \underbrace{(\cos x)^2}_{v}\underbrace{\sin x\,dx}_{-dv}$

$= \frac{u^3}{3} - \frac{v^3}{3} + C = \frac{1}{3}(\sin x)^3 - \frac{1}{3}(\cos x)^3 + C$

MATHEMATICS FINAL EXAM 14 August 2013

QUESTION 2 The blanks below will be filled by students. (Except the score)

Surname:	Name:	Group Number:	List Number:	Score
Signature:	Electronic Post(e-mail) address:	Student Number:		

For the solution of this question please use only the front face and if necessary the back face of this page.

[12 pt] a) Suppose that y is a differentiable function of x satisfying the equation

$$\int_0^{x+y} e^{-t^2}\,dt = xy.$$

Find $\left.\frac{dy}{dx}\right|_{(x,y)=(0,0)}$.

[13 pt] b) The region bounded by the curve $y = \ln x$, the lines $x = 4$ and $y = 1$ is revolved about the y-axis to genarate a solid. Find the volume of this solid.

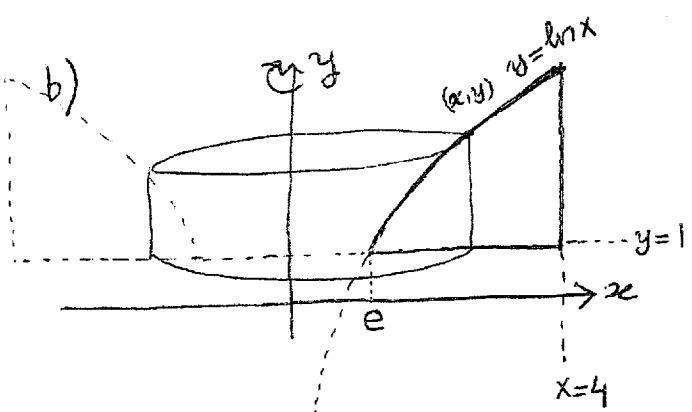
a) Differentiation wrt x gives

$$e^{-(x+y)^2}\cdot\frac{d}{dx}(x+y) = 1\cdot y + x\cdot\frac{dy}{dx}$$

$$e^{-(x+y)^2}\cdot\left(1+\frac{dy}{dx}\right) = y + x\frac{dy}{dx}$$

$x=y=0$: $e^{-(0+0)^2}\cdot\left(1+\left.\frac{dy}{dx}\right|_{(0,0)}\right) = 0 + 0\cdot\left.\frac{dy}{dx}\right|_{(0,0)} \Rightarrow \left.\frac{dy}{dx}\right|_{(0,0)} = -1$ //

b)



Using Shell Method

$$V = \int_a^b 2\pi\,(\text{Shell Radius})(\text{Shell Height})\,dx$$

$$= \int_e^4 2\pi\cdot x\cdot(\ln x - 1)\,dx$$

$$= 2\pi\left\{(\ln x - 1)\cdot\frac{x^2}{2}\Big|_e^4 - \int_e^4 \frac{x^2}{2}\cdot\frac{dx}{x}\right\}$$

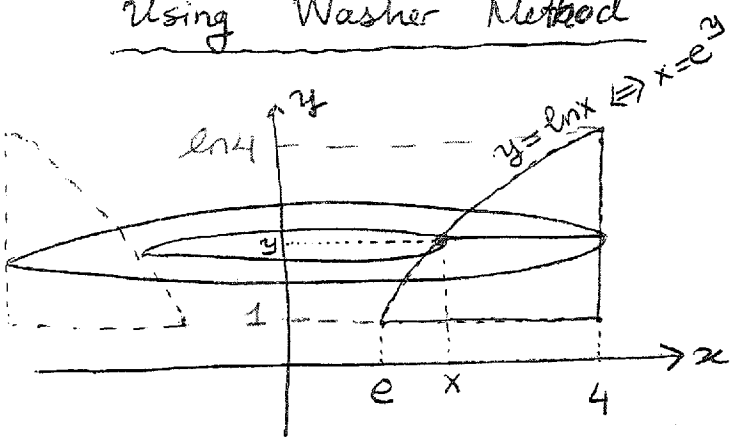
$$= 2\pi\left\{(\ln 4 - 1)\cdot\frac{4^2}{2} - 0 - \frac{1}{2}\cdot\frac{x^2}{2}\Big|_e^4\right\}$$

$$= 2\pi\left\{8\ln 4 + \frac{e^2}{4} - 12\right\}$$

$u = \ln x - 1 \Rightarrow du = \frac{dx}{x}$

$dv = x\,dx \Rightarrow v = \frac{x^2}{2}$

Using Washer Method



$R(y) = 4$

$r(y) = e^y$

$$V = \int_a^b \pi \left[\left(\underbrace{\text{outer radius}}_{R(y)} \right)^2 - \left(\underbrace{\text{inner radius}}_{r(y)} \right)^2 \right] dy$$

$$= \int_1^{\ln 4} \pi \left[(4)^2 - (e^y)^2 \right] dy$$

$$= \pi \int_1^{\ln 4} (16 - e^{2y})\, dy = \pi \left(16y - \frac{1}{2} e^{2y} \right) \Big|_1^{\ln 4}$$

$$= \pi \left(16 \ln 4 - \frac{1}{2} e^{2 \ln 4} - 16 + \frac{1}{2} e^2 \right)$$

$$= \pi \left(16 \ln 4 - 8 - 16 + \frac{1}{2} e^2 \right)$$

$$= 2\pi \left(8 \ln 4 - 12 + \frac{e^2}{4} \right)$$

MATHEMATICS 101E – 101 FINAL EXAM 14 August 2013

QUESTION 3 The blanks below will be filled by students. (Except the score)

Surname:	Name:	Group Number:	List Number:	Score
Signature:	Electronic Post(e-mail) address:	Student Number:		

For the solution of this question please use only the front face and if necessary the back face of this page.

[13 pt] a) Evaluate the following improper integral

$$\int_0^{\infty} \frac{dx}{4x^2+9}$$

[12 pt] b)Evaluate the following limit:

$$\lim_{x\to 0^+} \frac{\sin x - \cos\sqrt{x} + 1}{x^2}$$

a) $I = \int_0^{\infty} \frac{dx}{4x^2+9} = \lim_{b\to\infty} \int_0^{b} \frac{dx}{4x^2+9}$

$$\int \frac{dx}{4x^2+9} = \int \left\{ \begin{array}{l} x = \frac{3}{2}\tan\theta \\ dx = \frac{3}{2}\sec^2\theta\, d\theta \end{array} \right\} = \int \frac{\frac{3}{2}\sec^2\theta\, d\theta}{4\cdot\frac{9}{4}\tan^2\theta + 9}$$

$$= \int \frac{\frac{3}{2}\sec^2\theta\, d\theta}{9(1+\tan^2\theta)} = \frac{1}{6}\int d\theta = \frac{1}{6}\theta + c = \frac{1}{6}\tan^{-1}\left(\frac{2x}{3}\right)$$

$$I = \lim_{b\to\infty} \frac{1}{6}\tan^{-1}\left(\frac{2x}{3}\right)\Big|_0^b = \frac{1}{6}\left\{\lim_{b\to\infty} \tan^{-1}\left(\frac{2b}{3}\right) - \tan^{-1}(0)\right\}$$

$$= \frac{1}{6}\cdot\left(\frac{\pi}{2} - 0\right) = \frac{\pi}{12}$$

b) $\lim_{x\to 0^+} \frac{\sin x - \cos\sqrt{x} + 1}{x^2} \overset{0/0}{=} \lim_{x\to 0^+} \frac{\cos x + \frac{1}{2\sqrt{x}}\sin\sqrt{x}}{2x}$

$$= \lim_{x\to 0^+} \frac{2\sqrt{x}\cos x + \sin\sqrt{x}}{4x^{3/2}} \overset{0/0}{=} \lim_{x\to 0^+} \frac{2\cdot\frac{1}{2\sqrt{x}}\cdot\cos x + 2\sqrt{x}(-\sin x) + \frac{1}{2\sqrt{x}}\cos\sqrt{x}}{4\cdot\frac{3}{2}\cdot x^{1/2}}$$

$$= \lim_{x\to 0^+} \frac{2\cos x - 4x\sin x + \cos\sqrt{x}}{12x} = \frac{2-0+1}{0^+} = +\infty$$

MATHEMATICS FINAL EXAM 14 August 2013

QUESTION 4 The blanks below will be filled by students. (Except the score)

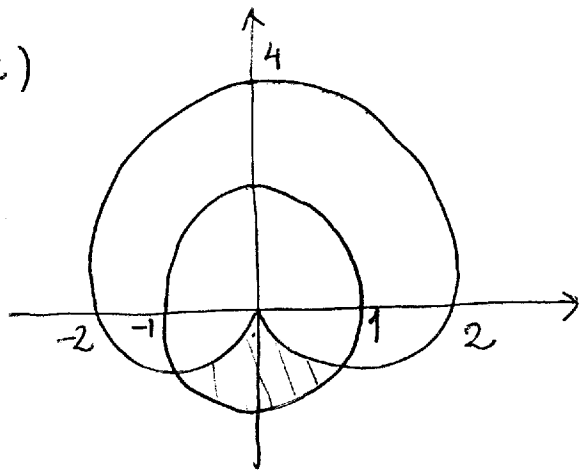
Surname:	Name:	Group Number:	List Number:	Score
Signature:	Electronic Post(e-mail) address:	Student Number:		

For the solution of this question please use only the front face and if necessary the back face of this page.

[15 pt] a) Find the area of the region which lies outside the curve $r = 2 + 2\sin\theta$ and inside the curve $r = 1$.

[10 pt] b) Find the length of the curve $r = \theta^2, \quad 0 \le \theta \le \sqrt{5}$.

(a)



$r = 2 + 2\sin\theta = 1 \rightarrow \sin\theta = -\frac{1}{2}$

$\Rightarrow \theta = \frac{7\pi}{6}, \quad \theta = \frac{11\pi}{6}$

$$A = \int_{\alpha}^{\beta} \frac{1}{2}\left[r_2^2 - r_1^2 \right] d\theta$$

$$= 2\int_{7\pi/6}^{3\pi/2} \frac{1}{2}\left[1^2 - (2+2\sin\theta)^2 \right] d\theta$$

$$= \int_{7\pi/6}^{3\pi/2} \left[1 - (4 + 8\sin\theta + 4\sin^2\theta \right] d\theta = \int_{7\pi/6}^{3\pi/2} \left[-3 - 8\sin\theta - 4 \cdot \frac{1-\cos 2\theta}{2} \right] d\theta$$

$$= \left(-3\theta + 8\cos\theta - 2\theta + \sin 2\theta \right) \Big|_{7\pi/6}^{3\pi/2}$$

$$= -5\left(\frac{3\pi}{2} - \frac{7\pi}{6} \right) + 8\left(\cos\frac{3\pi}{2} - \cos\frac{7\pi}{6} \right) + \left(\sin 3\pi - \sin\frac{7\pi}{3} \right)$$

$$= -\frac{5\pi}{3} + 4\sqrt{3} - \frac{\sqrt{3}}{2} = \frac{7\sqrt{3}}{2} - \frac{5\pi}{3}$$

(b) $$L = \int_{\alpha}^{\beta} \sqrt{r^2 + \left(\frac{dr}{d\theta}\right)^2}\, d\theta = \int_{0}^{\sqrt{5}} \sqrt{(\theta^2)^2 + (2\theta)^2}\, d\theta.$$

$$= \int_{0}^{\sqrt{5}} \theta\sqrt{\theta^2+4}\, d\theta = \left\{ \begin{matrix} u = \theta^2 + 4 \\ du = 2\theta d\theta \end{matrix} \right\} = \int_{4}^{9} \sqrt{u} \cdot \frac{du}{2} = \frac{1}{2}\,\frac{u^{3/2}}{3/2} \Big|_{4=2^2}^{9=3^2}$$

$$= \frac{1}{3}\left(3^3 - 2^3\right) = 19/3 \;//$$
